About Cameo Collaborator Publisher
Cameo Collaborator: a web-based collaboration platform

**Present models**
- Present models in a simplified form for stakeholders

**Review**
- Review models and diagrams

**Sync**
- Keep the entire project team up to date
Predefined Templates

• BPMN
• Entire Model
• Requirements
• Requirements Document
• Software Engineering
• SysML
• UPDM

No Magic
Customizable templates
New Templates Customization Approach
Concepts used for modeling templates
Document

- **Document** - is the modeling element that represents the artifact that is used to define the new instance of document that will be published to Web portal.
**View**

- **View** - view is the modeling element that represents the artifact that is presented to the stakeholder. A view conforms to only one viewpoint to ensure that only one method is applied to the view. The view must be related to the model that contains the information and the method that produces the view.
Viewpoint

- **Viewpoint** - a viewpoint is a specification of rules for constructing a view to address a set of stakeholder concerns. The view is intended to represent the system from this viewpoint.
Viewpoint methods

- **Viewpoint methods** - the method is the set of rules that describe how the view should express the information from the model to address the stakeholder concerns. The method can be specified as a process and/or a set of constraints for producing a view, which may include rules or instructions for analyzing or verifying the view content.
Actions for Modeling Viewpoint Methods

- Common Elements
- Collect Model Elements
- Filter Model Elements
- Sort Model Elements
- Create Table Structure
- Predefined Templates
Diagrams Used for Modeling Templates

- Collaborator View Diagram
- Collaborator Viewpoint Method Diagram
The Truth is in the Models

Thank You!
